## First phosphate-free potato-wash now on sale

on October 6, 2014

Orgacure, the sustainable shelf-life innovator, developed the industry's first phosphate-free potato-wash for peeled and cut potatoes to address European and North-American potato processors. Phosphate is used in agriculture as fertilizer or in detergents such as dishwasher tabs and its use in food application is strictly guided by the European Food Safety Authority (EFSA). Phosphorus, the source of phosphate, is a limited, non-renewable global resource and the EU has called with its European Sustainable Phosphorus Platform (ESPP) for action to manage phosphorus sustainably as it is crucial for agriculture, food, industry, water and the environment. [More](#)
